AI / Backend Engineer (LLM Systems & Applied AI)

AI & Backend Engineer specializing in building production LLM-powered systems, RAG pipelines, and AI-driven automation platforms.

Experienced in designing and deploying AI applications using OpenAI and GenAI APIs, including retrieval-augmented generation systems, OCR-based document intelligence pipelines, and conversational AI assistants. Strong backend engineering background with FastAPI, MongoDB, and scalable API architectures supporting real-world production workloads.

Proven ability to bridge backend engineering and applied AI by building end-to-end systems: data ingestion → processing → AI reasoning → analytics → user-facing APIs. Comfortable working in fast-paced startup environments where rapid prototyping and production delivery are required.

WORK EXPERIENCE

Infinno LLC

01/2024 - 06/2026

Software Developer (AI & Backend Engineer) • Full-time

Remote

Worked on production AI systems, backend services, and data intelligence platforms combining LLMs, OCR pipelines, and scalable API architectures.

- Designed and developed AI-powered conversational system using OpenAI API and GenAI integrations
- Built Retrieval-Augmented Generation (RAG) system for contextual scene and knowledge retrieval
- Developed backend architecture supporting AI workflows, user conversations, and system state management
- Implemented AI evaluation and testing framework using simulated user-bot interactions
- Designed analytics engine tracking conversation quality, success rates, and behavioral metrics
- Supported production system handling 12,000+ users and 300+ daily AI-driven conversations
- Built OCR-based intelligence pipeline using OpenCV and pytesseract
- Designed system for extracting structured financial data from images and documents
- Implemented transformation logic converting raw extracted data into analytical outputs
- Generated automated Excel reports and data visualizations
- Built full pipeline: image input → OCR extraction → structured data → analytics output
- Developed FastAPI backend systems with MongoDB integration
- Designed and implemented REST APIs (60+ endpoints) powering frontend applications
- Built scalable asynchronous backend workflows and background processing systems
- Implemented system architecture supporting AI + data-driven features
- Researched BLE communication protocols and microcontroller systems
- Developed embedded scripting solutions for IoT device automation
- Worked directly with client-side stakeholders and technical teams
- Delivered AI system demos and technical presentations
- Mentored junior interns in backend and AI workflows

Machine Learning Intern

Remote

Focused on machine learning fundamentals, framework internals, and low-level implementation of data processing and ML components.

- Implemented simplified versions of logging and data processing systems
- Recreated core concepts of Pandas-like and Keras-like functionality
- Worked with TensorFlow, PyTorch, and Scikit-learn for ML experimentation

- Gained deep understanding of ML pipelines and model training workflows
- Studied internal architecture of machine learning frameworks

SKILLS

AI / LLM Engineering: AI-powered chat systems, GenAI APIs, OpenAI API, Prompt Engineering & LLM orchestration, Retrieval-Augmented Generation (RAG), Vector-based search concepts

Backend Systems: API Integrations, Asynchronous Processing, Django, FastAPI, MongoDB, Python, REST API Design & Development

Data & Intelligence Pipelines: Analytics workflows, Data transformation pipelines, Data Visualization, Document processing systems, OCR Pipelines, Pandas / NumPy

Machine Learning & Data Science: Data analysis & visualization, Model training pipelines, PyTorch, Scikit-learn, TensorFlow

Tools & Infrastructure: Embedded scripting (IoT / BLE systems), Git / Version Control, Jupyter Notebook, Microcontroller communication research

EDUCATION

Web Developer Diploma in Python Development, Web Applications, Backend Systems

SoftUni • GPA: 5.93 / 6.00

Sofia, Bulgaria

- Professional software engineering program (2+ years)
- Final grade: 5.93 / 6.00
- Focus: Python Development, Web Applications, Backend Systems

PROJECTS

Fishbook — Full-Stack Django Application

- Developed full-stack social media application using Django framework
- Built backend architecture, authentication system, and user interaction features
- Implemented database models and REST-like backend logic
- Independent academic project demonstrating full application development lifecycle

Weather Application — Multi-Interface Weather System

- Developed weather forecasting application using OpenWeather API
- Implemented multiple interfaces including console, Tkinter GUI, Flask, and Django web applications
- Built real-time weather data retrieval and city comparison features
- Demonstrated ability to work across desktop and web-based Python frameworks
