Python Backend Developer

- Python Backend & AI Engineer with 2+ years of professional experience designing and implementing production-grade backend systems, REST APIs, and AI-integrated applications.
- Strong expertise in FastAPI backend development, MongoDB database systems, OCR-based data processing, and AI integration using OpenAI and GenAI APIs. Experienced in building scalable automation pipelines, analytics systems, and RAG-based retrieval architectures.
- Proven ability to work across the full software lifecycle including system design, backend implementation, production deployment, client communication, and technical demos. Adaptable engineer with strong problem-solving skills and rapid learning capability across backend, AI/ML, and data engineering domains.

WORK EXPERIENCE

Infinno LLC

01/2024 - 06/2026

Software Developer • Full-time

Remote

Python Backend & AI Developer responsible for designing and implementing backend systems, AI integrations, data pipelines, and automation workflows for production applications.

- Developed and maintained FastAPI backend services
- Designed RESTful APIs (60+ endpoints) consumed by frontend systems
- Implemented MongoDB-based data models and backend architecture
- Built asynchronous processing and background task workflows
- Developed AI-powered conversational backend systems
- Implemented Retrieval-Augmented Generation (RAG) pipeline for context-based search
- Integrated OpenAI API and GenAI APIs for conversational features
- Built AI assistant testing framework using simulated user interactions
- Designed analytics system for conversation success rate and usage tracking
- Processed 12,000+ users and 300+ daily conversations in production
- Built OCR pipeline using OpenCV and pytesseract for image-based data extraction
- Implemented financial data transformation and calculation logic
- Automated generation of structured Excel reports and visual analytics outputs
- Designed end-to-end data processing workflow from raw input to final reporting
- Researched BLE communication protocols and microcontroller integration
- Developed embedded automation scripts and reusable system templates
- Built transformation logic for device-level scripting and automation workflows
- Client communication and technical requirement analysis
- Delivered technical demos and system presentations
- Mentored junior interns and supported onboarding processes
- Participated in system design and product development lifecycle

Machine Learning Intern

Remote

Focused on machine learning fundamentals, framework internals, and low-level implementation of data processing and ML components.

- Implemented simplified versions of logging and data processing systems
- Recreated core concepts of Pandas-like and Keras-like functionality
- Worked with TensorFlow, PyTorch, and Scikit-learn for ML experimentation
- Gained deep understanding of ML pipelines and model training workflows

- Studied internal architecture of machine learning frameworks

SKILLS

Backend Development: API Integration, Asynchronous Processing, Backend Architecture, Background Task Systems, Django, FastAPI, MongoDB, Python, REST API Design & Development

Artificial Intelligence / Machine Learning: GenAI APIs, Natural Language Processing (NLP), OpenAI API, Prompt-based AI systems, Retrieval-Augmented Generation (RAG)

Data Processing & Computer Vision: Data Transformation Pipelines, Image & Document Processing, NumPy, OCR Pipelines (pytesseract), OpenCV, Pandas

Machine Learning Libraries: Data Analysis & Visualization, Model Training Pipelines, PyTorch, Scikit-learn, TensorFlow

Tools & Platforms: BLE Communication Research, Embedded Scripting (Microcontrollers), Git / Version Control, Jupyter Notebook

EDUCATION

Web Developer Diploma in Python Development, Web Applications, Backend Systems

SoftUni • GPA: 5.93 / 6.00

Sofia, Bulgaria

- Professional software engineering program (2+ years)
- Final grade: 5.93 / 6.00
- Focus: Python Development, Web Applications, Backend Systems

PROJECTS

Fishbook — Full-Stack Django Application

- Developed full-stack social media application using Django framework
- Built backend architecture, authentication system, and user interaction features
- Implemented database models and REST-like backend logic
- Independent academic project demonstrating full application development lifecycle

Weather Application — Multi-Interface Weather System

- Developed weather forecasting application using OpenWeather API
- Implemented multiple interfaces including console, Tkinter GUI, Flask, and Django web applications
- Built real-time weather data retrieval and city comparison features
- Demonstrated ability to work across desktop and web-based Python frameworks
